

# KYOCERA HomePOINT Advanced

## Product Overview

### ACCESS DOCUMENTS, QUICKLY AND EFFICIENTLY

The ability to easily scan, store and access hardcopy information, such as presentations, invoices, project plans, and many other documents, are paramount to your business' success. Loss of these documents or delays in retrieving them is not an option. With on-demand document capture and retrieval capabilities, KYOCERA HomePOINT offers instant document access that your business requires.

### KYOCERA HOMEPOINT

With the KYOCERA HomePOINT business application, you now can instantly capture and send documents to your network home folder, while linking with your Active Directory login. KYOCERA HomePOINT makes document scanning and archiving easy. All documents can be digitized without having to install software on local workstations, any special middleware or server add-ons – enabling businesses to further leverage their existing IT infrastructure.

### KYOCERA HOMEPOINT ADVANCED

KYOCERA HomePOINT Advanced allows you to scan and send documents to your network home folder or subfolder within it. In addition, KYOCERA HomePOINT Advanced allows you to browse through subfolders within your network home folder, create new subfolders and even access and print PDF documents that are already in your home folder – eliminating the need to use your PC or workstation to complete the task. For a more streamlined experience, KYOCERA HomePOINT Advanced enables you to use your HID card to login to the application.

With the KYOCERA HomePOINT business applications, you now have an enterprise-wide portal to and from your corporate network home folder. This means increased efficiency in accessing your most important work product – the documents that power your business.
