

# Language Exchange

## Product Overview

### TEAR DOWN THE LANGUAGE BARRIER

Operating a KYOCERA multifunctional product is easy. However, if you cannot read the control panel's language, it can become a barrier to perform required operations. Kyocera's Language Exchange business application eliminates that barrier by allowing you to switch the KYOCERA MFP control panel language with one click.

### UPDATE MFP CONTROL PANELS WITH YOUR NATIVE LANGUAGE

Users in multi-lingual environments can now operate an MFP's control panel in their native language. Supporting French Canadian, Spanish, and Portuguese, the app allows users to choose their native language with a single touch, simplifying device operations in a user's desired language. The device will automatically revert to the default language when a user logs out or the device returns to sleep mode.
