

# Pcounter

## Overview

### MAKE YOUR PAGES COUNT!

Pcounter is a cost-effective output management solution that makes it easy for organizations to manage the workflow of documents that are being printed, copied, scanned or faxed. Pcounter provides end users secure and convenient access to document release capabilities.

Pcounter effectively optimizes the management of devices, such as printers and MFPs, while reducing the waste across the enterprise by making the appropriate personnel accountable for what is being printed or copied.

### TRACK AND MONITOR ALL DEVICE USAGE

The Pcounter solution is fully customizable and scales to the size or need of each and every client. Pcounter tracks and monitors all prints, copies, scans and faxes. Each device can use its own pricing model for both color and black and white copies or prints. An optional popup is configurable for authentication, if needed. Rules and enforcement of charge-backs or quota limits can also be applied.
