

# PinPoint Scan 3

## Product Overview

### PERSONALIZED SCANNING MADE SIMPLE

KYOCERA brings speed and flexibility to one of your most essential workflow functions with PinPoint Scan™ 3, powered by HyPAS. With one easy-to-install application, your employees will have their own personalized scanning solution designed to fit their unique workflow needs.

### PINPOINT SCAN 3 FOR KYOCERA MFPS

Instead of restrictive scan to email or scan to shared folder methods, employees can now scan directly to any number of locations on their PC or Mac, quickly and securely, from a network-connected KYOCERA MFP. Personalized scanning destinations can be easily created and managed, without the need for IT intervention. These destinations then become simple one-touch buttons on the MFP control panel. When employees want to scan a document, all they have to do is access the PinPoint Scan 3 application on the KYOCERA MFP, enter their pin code, select a destination, and they're ready to go! A single MFP license supports any number of users on the same network.

### SECURE AND CONFIDENTIAL SCANNING

PinPoint Scan 3 also protects confidential documents, since all communication between the MFP and the receiving device is encrypted. In addition, businesses can easily integrate with existing HID cards to further streamline workflow and enhance document security.
